Title: Los Alamos National Laboratory Weapons Program Overview Brief

Author(s): Port, Michael Denis

Intended for: LANL Orientation Presentation Opportunities

Issued: 2021-09-29

Los Alamos National Laboratory Weapons Program **Overview**

Michael Port Director, Mission Integration National Security and International Studies Office

LANL Weapons Program Overview

- **Our Science**
- Guiding Principle of Los Alamos
- LANL the Design Laboratory
- Weapons Mission
- Science, Engineering and Computations
- Future Weapons Program R&D
- NNSA
- Aging Weapons
- A Final Thought
- Questions and Answers

Our Mission

Guiding Principle of Los Alamos

"There must be no barriers for freedom of inquiry. There is no place for dogma in science. The scientist is free, and must be free, to ask any question, to doubt any assertion, to seek for any evidence, to correct any errors."

- J. Robert Oppenheimer

LANL is the design laboratory for the majority of the Nation's on-alert deterrent

"Nuclear weapons have and will continue to play a critical role in deterring nuclear attack and in preventing large scale conventional warfare between nuclear armed states..."

- Former Secretary of Defense Jim Mattis, Nuclear Posture Review

Los Alamos National Laboratory: A National Security Science Resource for the Nation

- To date, Los Alamos has designed a certified 46 of the 63 nuclear weapon systems put into the U.S. Stockpile
- Today's stockpile consists of 7 types of weapons
 - W76* & W88* are carried on Trident submarines
 - W78* & W87 are carried on ICBMs
 - B61* / B83 /W80* are carried on an aircraft
- Annual Assessment Process
 - Technical assessment developed every year, presented in LANL briefings to the Deputy Director Weapons (DDW) and LANL Director
 - Leads to Director's Letter to DOE, DOD, President, on the state of LANL weapons

* LANL Designed Weapons

By law, Los Alamos Director reports on the state and health of the Nation's deterrent

LANL's multidisciplinary science and engineering capability

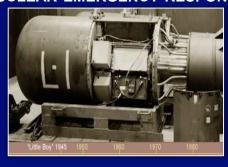

Weapons Mission

A key component of the Weapon's mission is to provide expertise and tools for technical assessment in broader Global Nuclear Security

FOREIGN NUCLEAR

NUCLEAR EMERGENCY RESPONSE

NUCLEAR COUNTERTERRORISM

NUCLEAR FORENSICS

NUCLEAR NONPROLIFERATION

NUCLEAR CONSEQUENCE MANAGEMENT

- What are the other countries pursuing regarding nuclear weapons?
- How do we ensure we are providing accurate assessments in a timely manner?
- What response options should the U.S. have available?

The mission demands the Laboratory's excellence for solutions to national security

In 2021

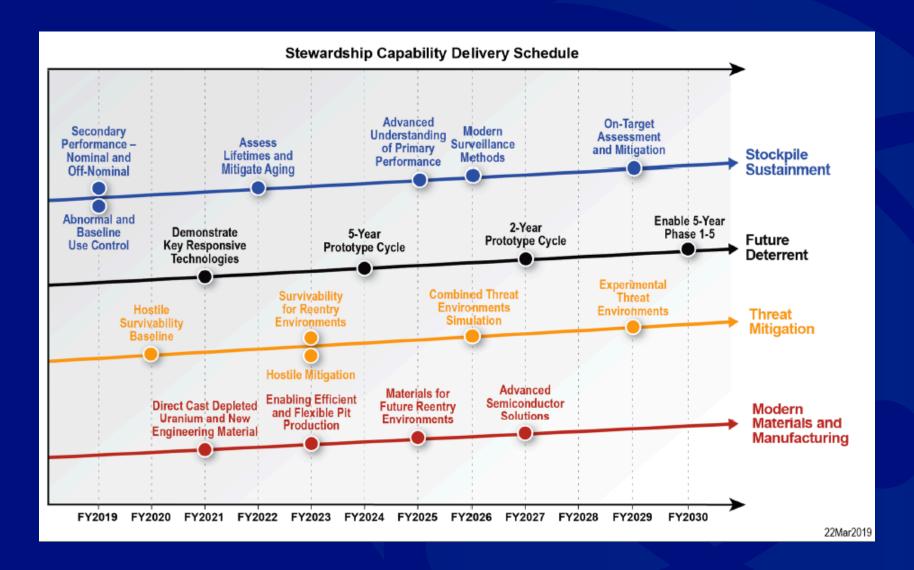

- ~ 13,400 employees
 - ~40% annual hires = PhDs
 - ~1,100 veterans
 - ~1,800 summer students
- ~\$3.8B Budget

- 36 square miles
- 47 technical areas
- 1,280 buildings/9M sq ft
- 11 nuclear facilities
- 268 miles of roads

LANL is hiring @ 1,000 new employees annually

These objectives guide our weapons programs work (NNSA and labs maintain the guidance)

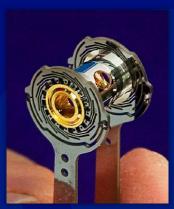

Science, engineering and computations underpins all national security work of the laboratory

- Experiments:

 1,000s of experiments
 conducted annually to further
 our understanding and
 confidence in the stockpile
- Modeling and Simulation: World class computing hardware/software
- Designer Judgement:
 - Experimental data used to check judgement
 - Train next generation

High Energy Density (HED) Experiments

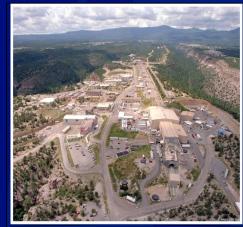

Large bore powder gun – measures differences in performance of weapon materials of interest.

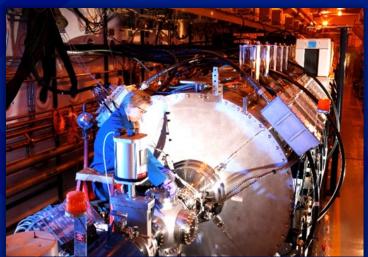

World class radiographic capabilities supports LANL/LLNL weapons and global security programs

- DARHT world-class Xray radiography for dynamic non-nuclear tests
- Axis I: single image; Axis II: four images
- Experiments contained to reduce environmental impacts and increase shot rate
- LANSCE pRad accelerator provides dynamic proton imaging (>17 frames)

LANSCE DARHT

Petascale Supercomputing is critical to Los Almos' national security missions

- Stockpile challenges are increasingly complex as systems continue to age
- DARHT, LANSCE etc provide large data sets to resolve stockpile challenges
- Data sets require ever more capable machines that can quickly process information
- Capacity and Capability machines
 - Trinity
 - Fire, Ice

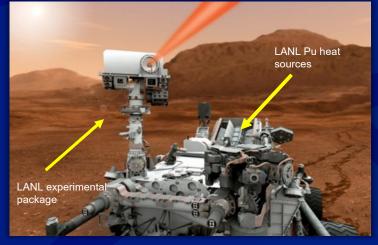

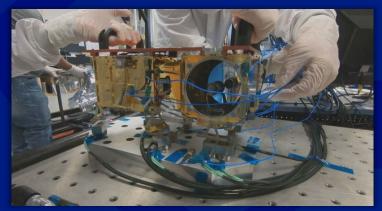

Los Alamos: center for plutonium excellence and critical to science and security

- Deliver parts for LANL experimental science
- Deliver parts for DoD Mission
 - 30 pits per year 2026
 - Partner with STRATCOM, Global Strike, USAF, USN...
- Deliver parts for NASA and other federal agencies
- Provide technical options to meet new and emerging challenges
 - International Atomic Energy Agency (IAEA) training
 - Additive manufacturing

Mars Curiosity Rover

SuperCam for Mars 2020 mission

Two recently published documents are suggesting some broadening of future Weapons Program R&D

NPR

"The United States is observing a return to Great Power competition...potential adversaries have expanded and modernized their nuclear forces"

"The Secretary of Energy...shall carry out a stockpile responsiveness program...to continually exercise all capabilities required to conceptualize, study, design, develop..."

SRP

Ability to completely design, certify, qualify, and if appropriate, produce a nuclear weapon for stockpile that is responsive to an emergent need, in a timely manner.

NNSA

Building off of the current program and assessment of evolving threats, establish strategy for more responsive and resilient enterprise

The complex is being engaged to:

- Identify both "evolutionary" improvements and "revolutionary" changes to current production processes
- Seek out innovations that would enable increased production throughput
- Develop more material-efficient production processes (lessen waste streams)

At the Labs, we are beginning to think about concepts that trade between:

- Performance requirements (e.g. weight, volume, yield, degree of surety, etc.)
- Select performance margins (margin to "failure cliffs")
- Ease of manufacture / manufacture throughput rate
- Cost
- Placement of risk (certification vs. manufacture vs. qualification)

Aging Weapons

As the weapons enter their 4th decade of life, it is becoming increasingly more challenging to assess the weapons and project when they age out.

As weapons age:

- Components can deteriorate due to operational environments
 - Vibrations
 - Temperature cycling
 - Humidity
- Materials can change as a result of intrinsic radiation and chemical reactions
 - Plastics can become brittle
 - Adhesives can weaken
 - Metals can corrode, metal coatings can deteriorate
- Material physical properties can change. Loss of ductility, elasticity or strength

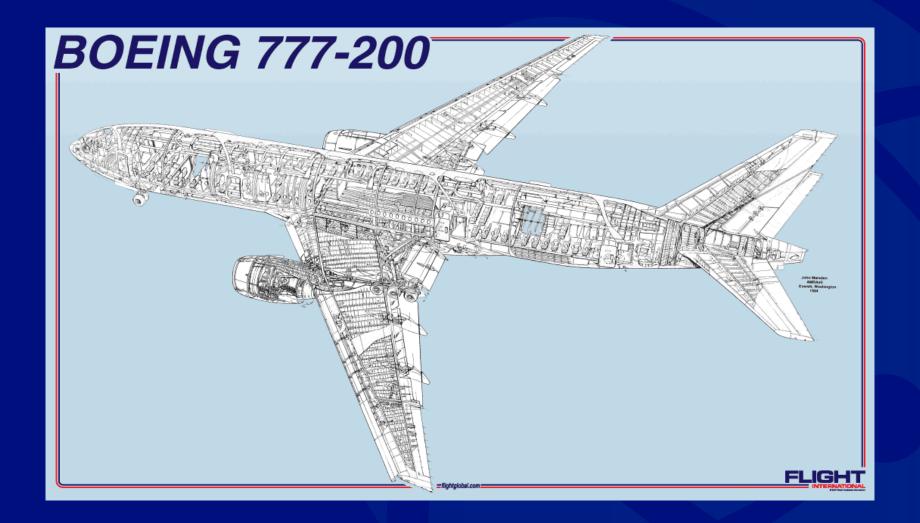

How long will a weapon be viable? What is its lifetime? Weapons refurbishments consist of a mixture of reused, remanufactured and replacement components. We confront issues such as:

- Increasing number of materials in original weapon builds no longer commercially available
- Reuse of components can imply reemploying decades-old components
- Processes for remanufacturing components have evolved
- Experience base with particular replacement components may be limited
- Weapon performance must be certified under hostile nuclear threat environments

What options can be developed & certified w/o further nuclear testing?

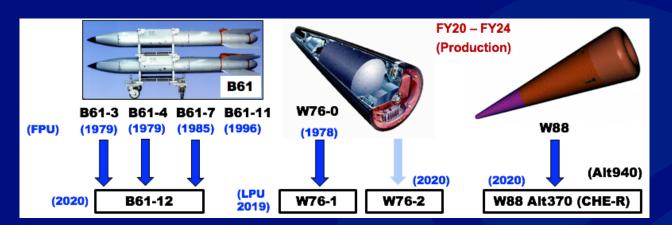

Would you fly in it after its been parked for 20+ years?

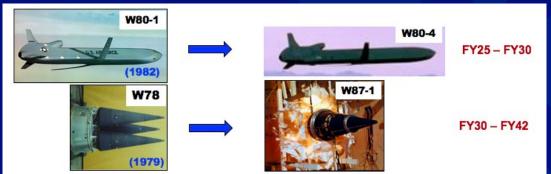

Concept trades are being examined in the context of future weapon options

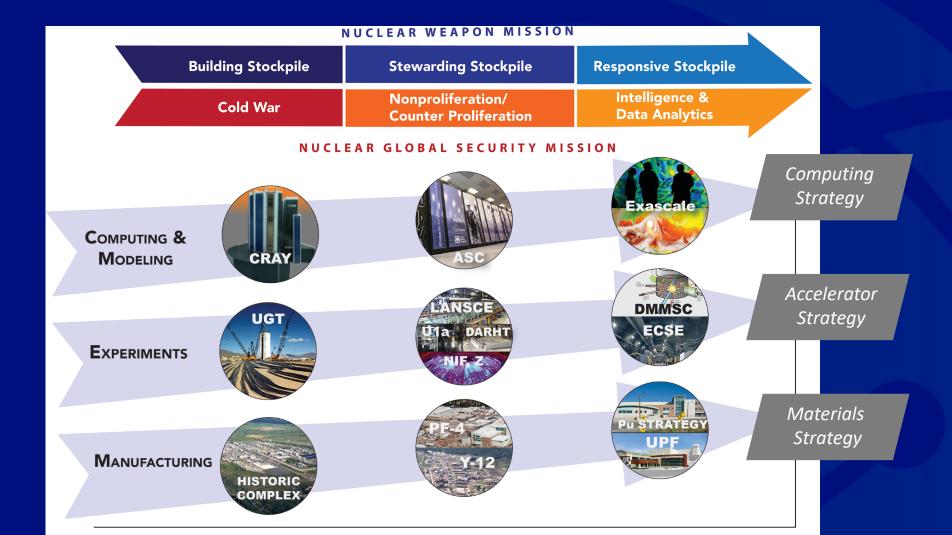

Far Term **Trident SSBN** W76-1 **W88** W76-2 **Columbia SSBN W88** W76-1 W76-2

Mid Term

We see an enduring future for an integrated Laboratory

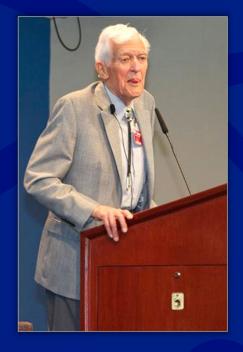

A Final Thought

"This Laboratory has always been something of a wonder. Every one of you should be very proud that you are part of it. Take note it does wonderful things. Do well with it."

Roger Rasmussen
